valkirya NDA

a simple non-disclosure agreement. it is the step that opens the closed sections of valkirya[1].
version 2026-10-12

1. parties

- discloser: Joy, founder of valkirya and cyberia, telegram @st_joy
- recipient: the woman who signs this agreement

2. confidential information

the closed sections of the valkirya school paper[1] — the oath, the four dimensions, the three completions, the six metrics and the growth architecture — and everything the discloser shares about them, in any form: text, voice, video, conversation.

3. obligations of the recipient

1. she keeps the confidential information to herself
2. she uses it for one purpose: to decide whether she joins the school
3. she keeps it away from third parties, publications, recordings and AI services
4. on request she deletes or returns every material she received

4. what stays free

the obligations cover information that is confidential at the moment of disclosure. they leave free:

- what is public, or becomes public through no act of the recipient
- what the recipient lawfully held before disclosure
- what a court or state body lawfully demands — the recipient tells the discloser first, where the law allows

5. term

the agreement holds for twenty years from signing. the obligations of section 3 hold for the same twenty years, also after the recipient leaves the school or declines it.

1 — valkirya, page of the cyberia knowledge graph, section “behind the door”.

6. breach

a breach closes the recipient's path in the school. the discloser keeps the right to claim damages under section 7.

7. law and reach

the agreement is multinational. it acts on the whole planet Earth and in major blockchains, Ethereum and Bitcoin first among them.

a claim goes, at the claimant's choice, to the courts of any country where the recipient lives, works or holds assets, under that country's law, or to international arbitration. a signature made with a key is evidence in each of these venues.

8. signing

the recipient signs in one of two ways and sends the result to @st_joy in a private message:

- with her key — a signature over the text of this version
- by hand — on this PDF, as a scan

the discloser countersigns and returns it. each side keeps one copy. signed copies live privately and never enter the graph.
